# Top Eleven Reasons to Upgrade to CodeCollaborator 6.0

---

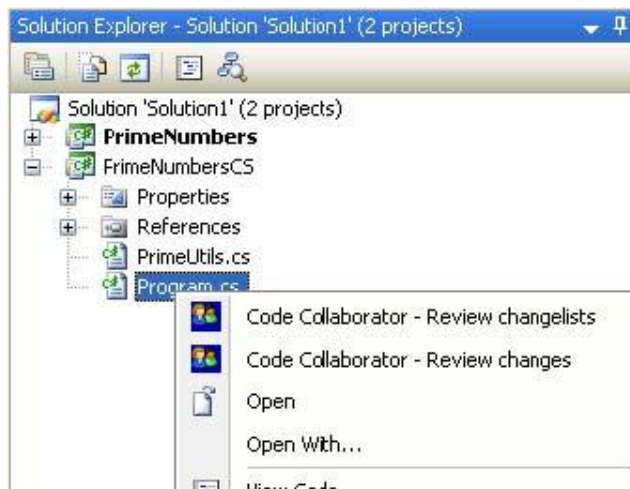

The next major release of CodeCollaborator will be version 6.0. The first beta was released on June 3, 2010.

Existing CodeCollaborator users will find a multitude of useful improvements in version 6.0. Eleven of our favorite features are:

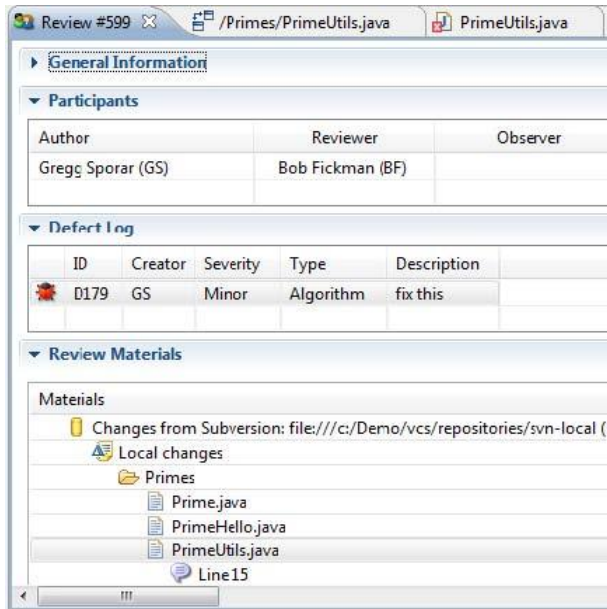

1. **Support for reviewing Microsoft Office Documents** – We initially added support for document review in v5.0, but it was limited to PDF files (and URLs and image files). Our customers asked for support for Microsoft Office files (Word documents, etc.) and we have delivered!

2. **Visual Studio Add-In:** Now you can create a review and add files to it directly within Visual Studio.

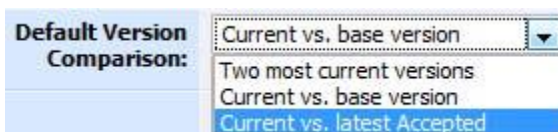

- Review Inside Eclipse** – A *significant* enhancement to our Eclipse plug-in allows you to examine files, add comments/defects, and more from within your Eclipse-based IDE.

- Zoom Control** – Zoom in and out on documents and image files while doing a comparison.

- Differences Since Latest Accepted** – This new user preference sets the file comparison window to display the differences between the most recent version of the file and the latest version that you Accepted.

- Redact a Comment** – If you type in a comment and then decide: “Doh, that’s not really what I meant,” now you can make it clear to the other participants that they don’t need to read it.

- 7. **Per-Participant Custom Fields** – Collect custom data from each participant in a review, for example, to gather survey data or time spent doing the review outside of CodeCollaborator.

Participant Custom Fields 				
	GS	BF	ES	TJ
<b>Time Outside CC:</b>	2	1	0	1

- 8. **Custom Word for “Defect”**– Some people call them defects, some call them bugs, others call them boogers. Now you can configure the user interface to display the word “Item,” or “Finding,” or whatever term works best for your team.

<b>Defect Label (singular):</b>	<input type="text" value="defect"/>
<small>User-visible label for "defect" (lower case), e.g. "Marked <b>defect</b> fixed".</small>	

- 9. **Integration with Rational Synergy** – Easily add pending or completed tasks from a Rational Synergy repository to a code review.
- 10. **User-Based Reports** – See total activity for a single user or multiple users for any span of time.

**All Users**

Report created for Bob Fickman on 2010-05-10 14:10  
 Sort #1: User Activity descending  
 Sort #2: Login ascending  
 Database query time: 0 seconds

ID	Login	Name	Last Login	Is Admin	Is Active	User Activity

7	bsmith	Bill Smith	2010-04-19 19:38	N	Y	00:01:33
6	tjones	Tom Jones	2010-05-04 17:21	N	Y	00:00:40
1	admin	Gregg Sporar	2010-05-06 14:23	Y	Y	00:00:15
15	ebrown	Eric Brown	2009-12-23 15:29	N	Y	00:00:10
5	esmith	Eilee Smith	2010-02-04 22:14	N	Y	00:00:10
9	findbugs	Find Bugs	2009-01-29 23:45	N	Y	00:00:05
4	krout	Kilgore Trout	2008-11-25 15:56	N	Y	00:00:00
10	Sam	Woods	1990-01-01 06:00	N	N	00:00:00
11	tjones	Steve Jones	2009-02-25 16:45	N	N	00:00:00
12	test1	Test User	2009-03-16 21:56	N	Y	00:00:00
13	trigger	trigger	1990-01-01 00:00	Y	Y	00:00:00

- 11. **Group Administrators** –Administering user groups can be delegated by the CodeCollaborator administrator to “regular” users of CodeCollaborator.
- 12. **Integration with Rational Team Concert** – From within the RTC workflow, create a review in CodeCollaborator with one or more change sets.

If you look closely, you'll see that there are actually *twelve* entries in the list above -v6.0 has *many* new features. :-) The list above is just a sampling.
